The Great Home Cinema Centre

If you look at the miniature home cinema sets which are widely available nowadays, you can notice two things:

1.) You might need more imagination than a positive-minded speaker technician to believe that these fist-sized speaker systems in thin plastic cabinets can deliver a sufficient sound. Compared with a specially designed high-fidelity speaker, you cannot ignore the limitations of these sets.

2.) Even with these systems which focus on minimum size and a most favourable price, you can often find centre speakers which feature at least a dual configuration of the full range effect speakers which are usually applied in these systems.

All in all, the second point just reflects that a centre speaker plays the most important and demanding part in a surround system. The performance of a home cinema system crucially depends on the centre speakers, then subwoofer, then front speakers and last but not least the rear speakers - always provided that the system features all of them. However, a high level standard can only be achieved with adequate solutions in each section. In case of an insufficient quality in the respective section, you can only achieve a limited result. The DIRECT features a design which is nothing less than a great (home) cinema system.

This centre speaker is certainly capable of reproducing any vocals and soundtracks in a high-quality manner and with sufficient level reserves.

The 3-way circuit with dual bass and a vertically mounted mid-high range meets any specification for a high-end sound reproduction of films and concerts.

Thus, the DIRECT is clearly very suitable for the combination with our high-performance hi-fi systems KODEX and STRAIGHT which also benefit from the superior quality of the MSH-116/4. With its perfectly warm, homogeneous and nonetheless extraordinarily detailed sound, the DIRECT simply fits into any serious top-class home cinema system.

Parts list included in the delivery:

Speakers:

- Bass-midrange speaker: 2 x SPH-176
- Midrange speaker: 1 x MSH-116/4
- Tweeter: 1 x DT-25N
