

Low Power Series

1/2 Channel Configurable 16W Class D Audio Amplifier Board - TPA3110 (AA-AB32231)

Key Features:

- Output Power
2 x 8W @ 8Ω, THD+N=10%
1 x 16W @ 4Ω, THD+N=10%
- Power Supply Range: DC 8V to 19V
- PBTl and BTL Configurable
- Power Indicator
- Heat Dissipation through PCB Copper
- Overcurrent Protection
- Overtemperature Protection
- 4-screw Easy Installation
- Weight: 90g/ 0.20 lbs (±10%)

Electrical Characteristics in Stereo Mode, $R_L=8\Omega$

Specifications typical @ +25°C, powered by 12V DC, unless otherwise noted. Specifications subject to change without notice.

Notes:

1. This amplifier board supports switching between stereo and mono mode and single-ended and differential input methods through two switches (SW1 and SW2) on this board. Please refer to Connection and silkscreen for detail information. The default setting is stereo mode and single-ended input.

2. All parameters were tested with Rohde & Schwarz UPV audio analyzer (AES17 filter enabled) and Audio Precision AUX0025 filter. For authorized distributors and OEM customers who need more detailed performance graphs and parameter settings, please send an inquiry e-mail to us. (Not available for retail customers)

3. Choose only one way to power the amplifier board at a time.

4. Feed only one group (dual channel) of audio signal to the amplifier board at a time.

5. Never connect more than one group of speaker to the audio output.

6. Never connect CH1_OUT-, CH2_OUT- together since they belong to different NETs.

7. 1 power LED indicator which is marked as "POWER" is on the board. It will be illuminated in green when power-up. 1 LED indicator which is marked as "FAULT" is on the board. It will be illuminated in red when there is something is wrong with the amplifier board.

Notes:

- The output power is rated at the condition THD+N 10%, 1kHz sine wave.
- All amplifier boards don't employ power supply reverse polarity protection. Stresses beyond the power supply range maximum ratings may cause permanent damage.
- None typical load may cause rating power reduction.
- Dimensions mean length and width of PCB only, excluding excessive part out of the PCB outline.
- All parameters were tested with Rohde & Schwarz UPV audio analyzer (AES17 filter enabled) and AP AUX0025 filter. Linear Power Supply units were used for testing.
- Sure Electronics promises all standard products life cycle more than 5 years. Sure Electronics reserves the right to update the version without notice. All the products sent to retail customers are the latest version. We will provide back-to-order service (100 Pieces MOQ needed) for our distributors in 5 years.

Mono Mode

Power Supply Connector:

- J3 DC8-19V power adapter socket Jack 5.5mm/2.1mm
- J1 Terminal Block RJ128

Speaker Output Connections:

- J5, J7 Terminal Block RJ128

	Description
J5	Negative polarity of mono output
J7	Positive polarity of mono output

*Notes: For mono output, OUT2+ and OUT2- are short circuited as the positive of speaker output, and OUT1- and OUT1+ are short circuited as the negative of speaker output.

Audio Input Connector:

- J8 is used for single-ended input terminal block in mono mode.
- The pin of J6 in red box is used for differential input in mono mode.

Mute Setting:

- J2 Terminal Block RJ128
